# System Integration

*Secure, Real-time, Bi-directional System Interface Using SOA*

**THE GOOD NEWS.** You get the go-ahead to modernize and improve the Diabetic Disease Prevention database.

**THE BAD NEWS.** The 5 partner agencies and 10 participating hospitals each use different IT systems that can't communicate or share data. Once again, you have to develop a new system or new database. Your program faces potentially serious delays and a cost over-run.

Or not … **Futrend's Service-Oriented Architecture System Integration Service** facilitates data sharing and transaction processing among systems, enabling:

- Real-time, records processing – no batching, no manual reconciliation, no waiting
- Flexible, adaptable, event-driven tracking that integrates old and future systems
- Multiple system integration across departments, among partners, and between programs
- End-to-end authentication, integrity and confidentiality through secure, encrypted Web Services
- Increased program efficiency and data accuracy

## IS FUTREND'S SYSTEM INTEGRATION YOUR SOLUTION?

As agencies adopt new Federal CIO Council standards, organizations prepared for the challenges of SOA will be uniquely positioned to take advantage of new technologies. Investing in service-oriented architecture helps you integrate multiple, complex systems without expensive system overhauls. Futrend's System Integration service allows you to achieve objectives, meet deadlines, reduce wait-time and prevent costly delays. It features:

- Publish-subscribe methodology
- Share reusable Web Services
- Loosely coupled integration architecture
- Web Service Security

To learn how Futrend's System Integration can help you keep mission-critical, deadline-driven projects on time and on budget, visit **www.futrend.com** to download our white papers and publications. Or contact us directly at **703-556-0016** or **1-866-FUTREND**.
